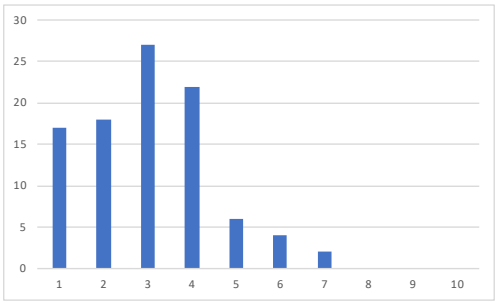
สรุปได้ว่าคน3คนจาก10คน จะชอบเยอะที่สุด คือ 27



Example: A company estimates that 30% of its customers would react positively to its new web features.

-Here, we demonstrate how to generate random observations that represent the number of customers who react positively to the company's new web features in a randomly selected group of 10 customers.

-Simulate random observations based on 100 groups of 10 customers.

-This is a binomial distribution experiment
